

Recommended equipment for the installation APPROACH:

1 DVD player
1 projector
1 Amplifier
4 Speakers Audio Prof
Cables
Etc

Important:

Approach is to be installed according to each individual space.

The important thing is that the viewer gets an experience of standing between image and voice. It should be like standing between 2 languages.

When the viewer is looking at the image, the voice quoting Dante comes from behind.

The stereo channel on the DVD is split so that it can be used for 2 different tracks:

One channel has the sound that belongs to the image: atmosphere and the sounds the deaf makes. This sound comes from speakers next to or above the image.

The other channel has the voice quoting Dante. From 2 - 6 speakers placed at the borders of the room across from the image (number of speakers is depending on the size of exhibition space).

It is important that the voice has an intimate quality, comes across very clearly and not too loud.
